

# Web Enrollment

## Reduce your paperwork

With UMR's Web Enroll, you can enter eligibility and enrollment information online—dramatically reducing your paperwork and freeing up your time.

### Multiple vendors and eligibility feeds?

No worries. UMR configures the site to collect information from all lines of business, no matter which vendors you use. We can incorporate standard lines of coverage such as medical, dental and vision, and more specific lines such as employee/spouse/child dependent/supplemental life, disability, cancer policies, flexible spending accounts, transportation or vacation buy-up/sell programs.

### Streamlined implementation

UMR's dedicated team of analysts and developers work with you to understand your specific workflow and eligibility rules. We then determine variants of these rules based on new hire enrollment, open enrollment and qualifying life status events.

In order to have adequate time to gather business requirements, complete the programming and perform testing, we require 90 to 120 days lead time prior to the go-live date.

### Payroll files

Our system also generates two types of files that feed directly into payroll systems:

- *Eligibility-based files* contain a history of the election or life-status change (for example: a dependent addition or new hire electing a plan).
- *Deduction-based files* provide the actual payroll deduction amount associated with the life-status change (for example: if changing from Plan A to Plan B, date-to-end deduction amount for Plan A and date-to-begin deduction amount for Plan B).
