

Truven Health Analytics Advantage Suite®

Better information, better results

Truven Health Analytics Advantage Suite® is a Web-based analysis tool for medical, pharmacy and enrollment data. It allows users to analyze health care costs, utilization, quality and performance trends and measures.

In addition to comparing the group's data from period to period, standard reports can be easily modified to conduct ad hoc analysis using the Explore feature. Reports are also available to compare costs to strong geographical and industry benchmarks. Data can be sliced based on specific needs and summarized by:

- Plans and product line
- Regions and metropolitan statistical area
- Employee status (active, COBRA, retiree)
- Relationship status (employee, spouse, dependents)
- Coverage tiers
- Locations
- Departments

Advantage Suite offers 32 reports with exploring and exporting capabilities. It provides condition and major diagnostic category information and rolling 24-month data, paid and/or limited incurred. Benchmark data (called MarketScan®) is based on 31.5 million lives.

The Advantage Suite decision-making cycle helps to:

- Identify and analyze customer business issues and cost drivers
- Design solutions for customer-specific business issues
- Support application of the solution in the customer-business environment
- Monitor and evaluate the results of implemented programs
- Identify and track health care cost trends, resulting in improved financial planning
- Evaluate the impact of health promotion and disease management programs
